Lab comes to you

What's New and Trends: Application Integration and iPaaS

Leif Davidsen Program Director, Product Management, Cloud Pak for Integration

Market trends

Digital Boom

\$6.3 tn about 55% of total global IT investment going into DX between 2022-24.

53% of enterprises having enterprise-wide DX strategy, **42%** increase since **2019**.

IDC FutureScape: Worldwide Digital Transformation 2022 Predictions

Application Explosion

80% of the organizations estimate they have **over 100 applications** in their portfolio today.

54% of applications will be **replaced and modernized to cloud** environment in 3 years.

IDC Survey: Worldwide Application Services, 2021

Workforce expansion

By 2026, **developers** outside IT will account for 80% of the user base of low-code dev tools

By 2023, **65%** of large organizations will enable their **non-IT personnel to perform integration tasks.**

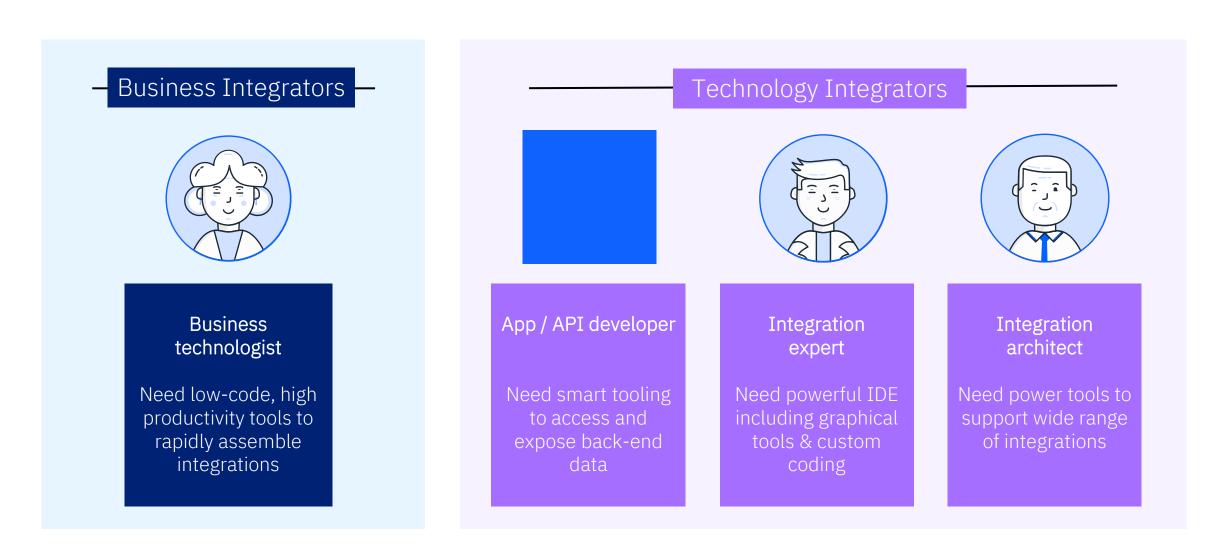

Gartner Forecast Analysis: Low-code Dev, Technologies, Oct 2022; Future of Work Trends: Tinkerers Become Mechanics

Enabling collaboration and self-service across business & IT

Integration Capabilities

IBM App Connect

Unlock the value of your system and data by connecting business applications, integrating data, building APIs and acting on events

Build

Quickly build and test integration flows with authoring tools for both integration experts and business technologists

Connect

Securely connect with hundreds of applications on cloud and on-premise with pre-built smart connectors and templates

Transform

The fastest performing engine that virtually supports any-to-any data format. Offers AI-infused, smart tooling for non-specialist

Manage

Easily deploy integrations using ESB or microservices with visibility into flow health and performance across hybrid environments

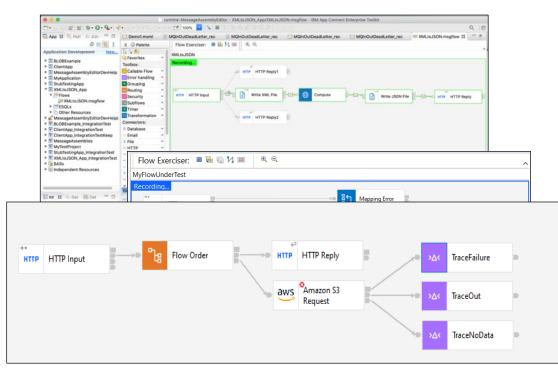

Complimentary authoring experiences support workforce expansion

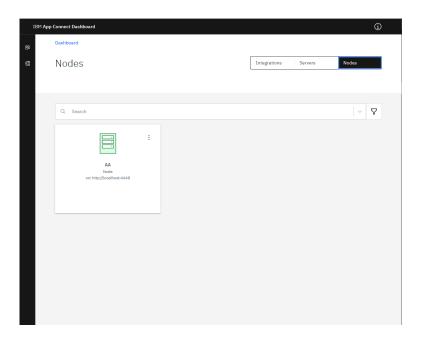

Designer for business technologists

Toolkit for integration experts

Easily deploy and manage across hybrid environments

View integrations across any hybrid cloud deployment

Single unified pane

Faster problem determination

Instantly identify health

Automate end-to-end with DevOps ready features

Build automated deployment pipelines and achieve unprecedented acceleration of project timelines

- ✓ Comprehensive set of mature APIs and CLIs to control each aspects of integration lifecycle
- ✓ New ibmint command family to help build source to server pipeline
- ✓ Integrate and run tests from unit test framework as part of pipelines
- √ Fully compatible with DevOps tools of choice

Available with choice and flexibility

IBM Cloud Pak for Integration

Consume application integration capabilities in a unified integration platform, on OpenShift anywhere

App Connect software

Deploy on-prem on X/P/Z or any cloud infrastructure, bring your own OpenShift, other K8s platforms, Docker or VM

IBM App Connect as a Service (iPaaS)

Consume a highly available, multi-tenant service fully managed, maintained and operated by IBM

What's new

What's new

Integrate & automate faster with AI

- AI field mapping (map assist)
- AI data mapping (data assist)
- Create flows using natural language

Leverage your data more effectively

- An API-Led experience for integration (Unified Authoring)
- 100s of new connectors in Designer
- 25+ new connectors in Toolkit
- Develop your own custom connectors (CDK)
- Connector community with ability to consume & contribute connectors

Consuming integration solutions on cloud

- Optimized integration runtimes in containers, built for cloud/K8s deployments
- Brand new ACE SaaS (iPaaS)
- Purchase and deploy on public clouds and from marketplaces (AWS)

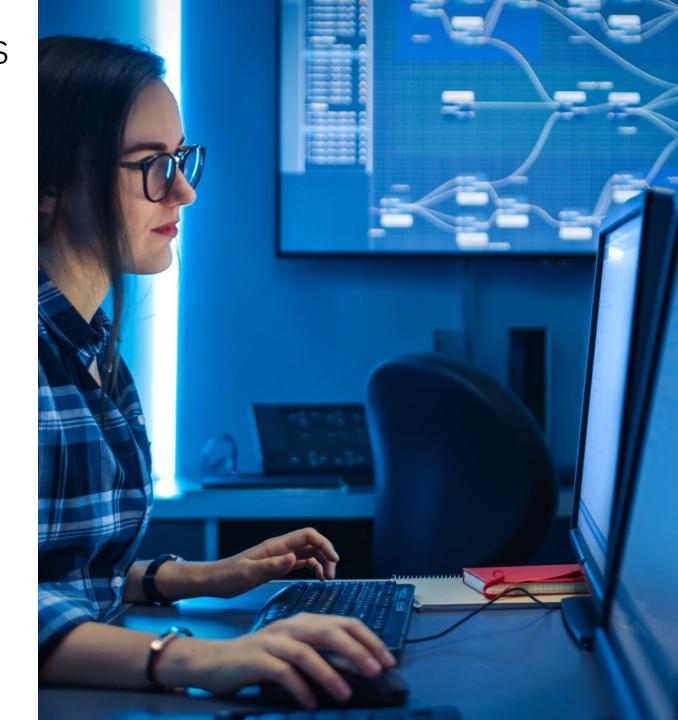

Integrate & automate faster with AI

AI Automation Feature Benefits

Simplification

AI Automation feature benefits

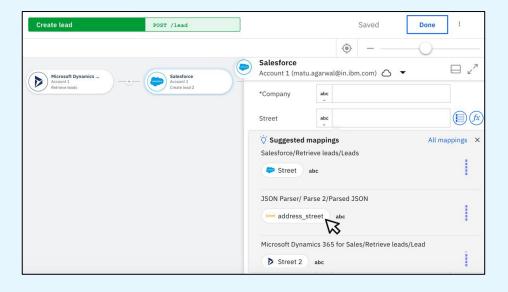

- Improved productivity Reclaim more than 50% of your developer time with intelligent automations
- Reduced learning curve Free up employees to focus on what they do best and get them going from the word "Go"
- Eliminate skills barrier Make technology accessible to everyone within your organization including nonexperts
- Boost confidence in decisions Developers make better, faster informed decisions with insight-driven recommendations
- Faster time to market Empower your developers to deliver projects 33% faster compared to any other existing solution

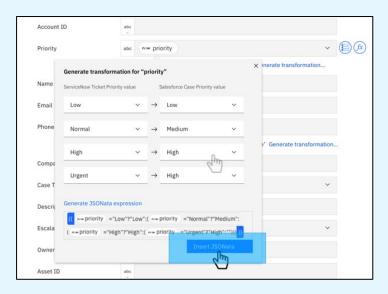

Simplify with AI

- Simplify field mapping between applications
- Easily transform data to and from JSON, XML and flat files
- Inline guidance and recommendations
- Generate flows using natural language

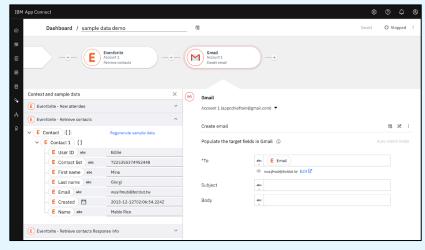

Receive suggested mappings

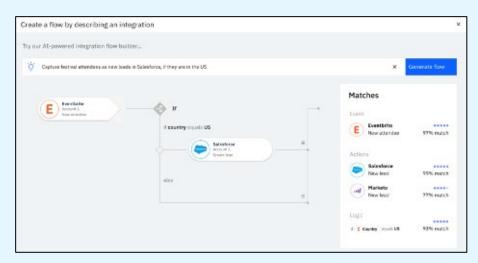

Quickly transform data

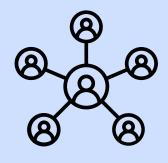

View guidance in line

Generate flow by describing it

Leverage your data more effectively

Unified Authoring

Connectors

Connector Development Kit

APIs are a key enabler of digital transformation & integration

API-led integration is a modern way to integrate applications and data through reusable APIs.

It replaces the overly complex point-to-point integration style to enable a more flexible, scalable and agile architecture.

Reduce cost by leading with APIs as the building blocks of integration

Quickly adapt to changing business needs by leveraging OpenAPI standards

Manage, secure, & share your APIs more efficiently & effectively

Business & IT Integrators

Design, Implement, Deploy APIs & Flows

17

Mock, Secure & Share APIs

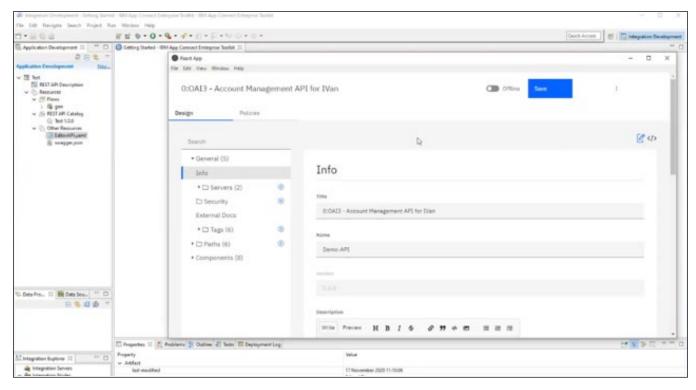

API Developers

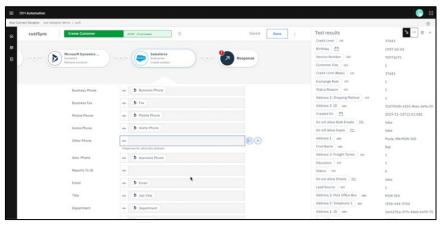

Unified API Authoring Experience

Seamlessly build, secure and share REST API implementations

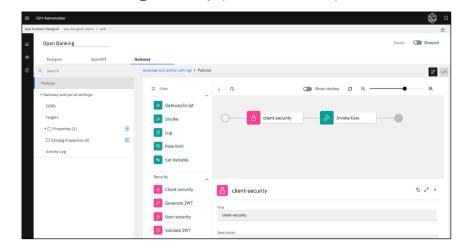

Define your OpenAPI

Build your API flows

Secure with gateway polices and publish for reuse

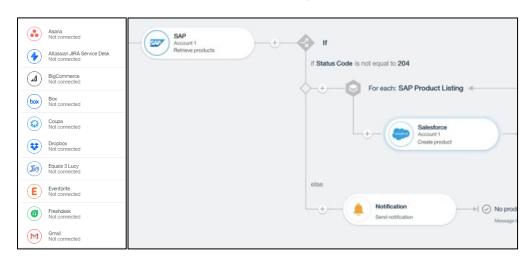

18

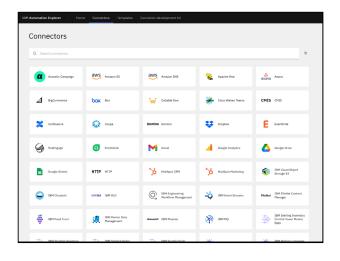

Connectors play a key role in integrating applications, building APIs and acting on events aws asana

What's new with Connectors

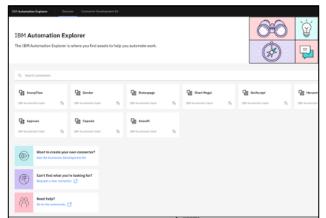

- Additional connectors provide more connectivity options to enterprise-apps
- New experience to discover and explore community connectors in Automation Explorer
- New low-code <u>Connector</u>
 <u>Development Kit</u> enables
 you to build your own
 connectors

Use even more connectors in Designer or Toolkit

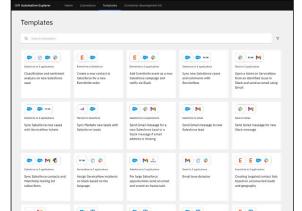

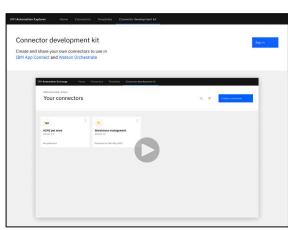

Discover more connectors

Learn and explore

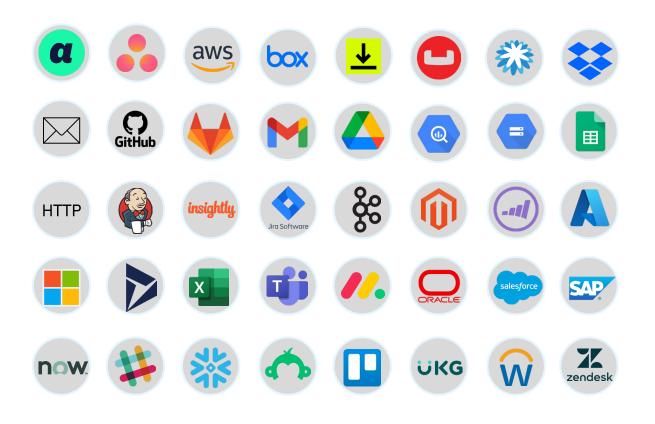

Build your own

20

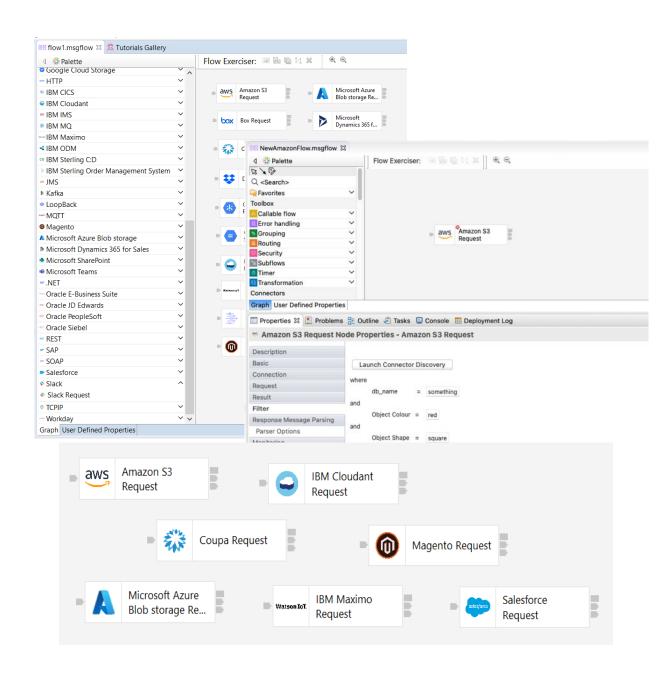

Leverage 200+ Connectors & Templates to jumpstart your integration

- Connectors pre-built for business-critical apps both SaaS and on-prem
- Connectors pre-built for technologies like databases and messaging when you need to understand interfaces to different systems
- Templates make it faster and easier to combine connectors to create integration flows
- Connectors created by our user community, built using Connector Development Kit

Connectors now in Toolkit

- Pre-built, smart connectors natively supported directly within Toolkit
- Integrate with pre-packaged cloud and on-premise apps with smart connectors without coding
- Use these smart connectors natively with other Toolkit features and capabilities
- Deploy these connectors and integration flows in ESB architecture on VMs or as microservices on containers/K8s platform
- Smart connectors and flows supported on all platforms supported by App Connect Enterprise
- New tutorials added as we go

IBM Connector Development Kit

A simple to use, low-code developer experience that enables you to build your own connectors in less than a day.

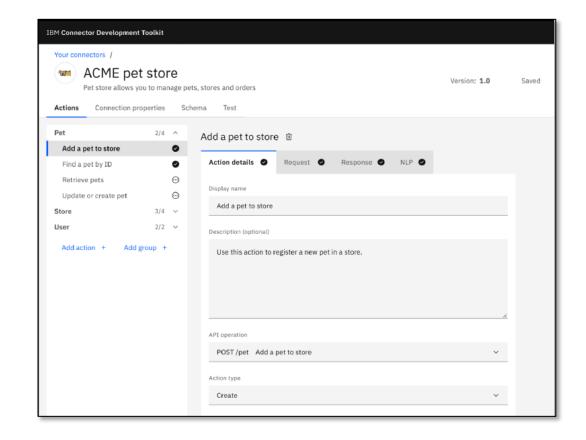

Build connectors from an Open API document or from scratch

Consume your connectors in App Connect, and ²³ extend the capabilities provided OOTB with unique requirements your business may have

Contribute to the connector ecosystem benefiting the global community

23

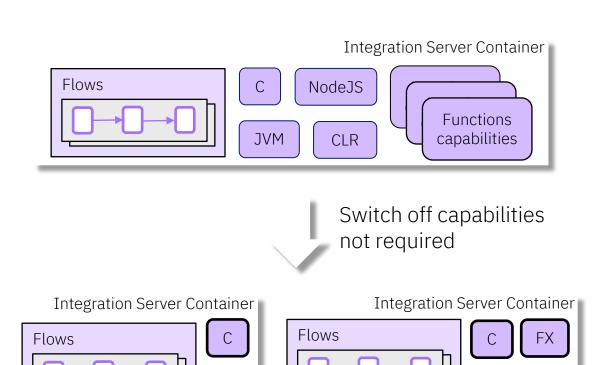

Consuming integration solutions on cloud

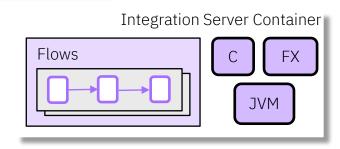

Optimizing your integration runtimes in containers

App Connect Enterprise SaaS

Optimize your Integration Runtimes

- New dynamic resource management allows complete control over which capabilities are started in container
- Provide finer-grained control to create more granular and light weight integration microservices
- Reduce footprint, quicker startup with certain workloads starting up in 1 second
- Save on CPU and memory cost by reducing overhead
- New command ibmint optimize server
- Generate new configuration server.component.yaml by examining working directory content
- v12.0.4+

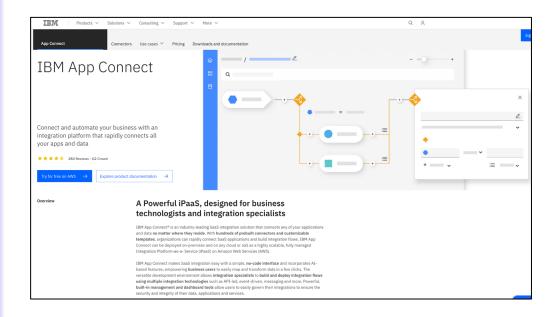

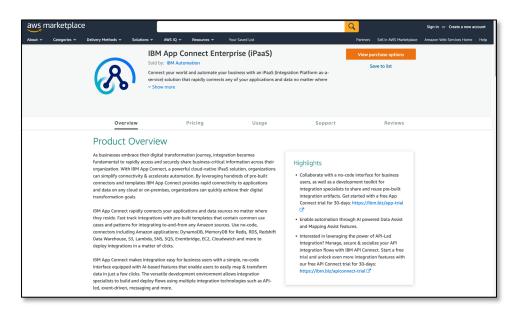

© 2023 IBM Corporation

NodeJS

App Connect Enterprise as a Service (iPaaS)

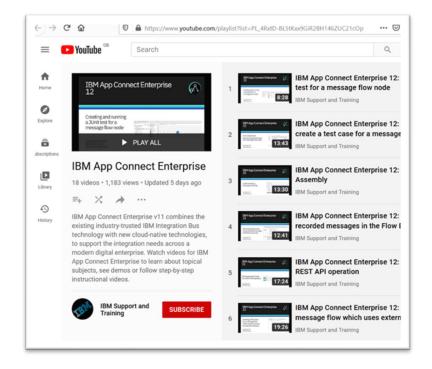

- ✓ Free 30-day trial available in all three regions
- ✓ Provision in US, EU, or UK Regions on AWS
- ✓ VPC-hour + premium connector pricing, annual term
- Multi-tenant SaaS with the benefits of isolation for deployed integrations
- ✓ Hybrid connectivity included with secure agents
- ✓ All premium and technology connectors available
- ✓ Get started quickly with templates and AI productivity features
- ✓ Discover community connectors in <u>IBM Automation Explorer</u>
- ✓ Develop custom connectors yourself with a low-code CDK
- ✓ And so much more ...
